Compiled quarterly by Cambridge Scientific Abstracts in association with the European
Chemoreception Research Organization, College de France, Paris

Foreword

Chemoreception Abstracts commenced publication in 1973 and is published quarterly. Each issue contains approximately 375 abstracts followed by author and subject indexes.

Coverage

In compiling each quarterly issue, CSA's editorial staff monitors approximately 5,000 primary journals and other source references for papers falling within the scope of **Chemoreception Abstracts**.

Subject scope and arrangement of subject matter

The table of contents shows the full scope of the journal. **Chemoreception** represents the bringing together of many different disciplines relating to taste, smell, internal chemoreception, chemotaxis and associated forms of sensitivity. Interest has developed on an international scale and the literature is very scattered. Abstracts are allocated to the section (subsection) to which they are most relevant and cross-referred to other sections (subsections) where appropriate.

Using this journal

Full details of the bibliographic data cited for each abstract and of abbreviations used can be found in the first issue of each volume.
